

# 3-D Arena Tips for Node Based Makeup

## Cassie for Genesis 8 Female

3-D Arena's characters that feature "Node Based" makeup options enable end users to create a variety of looks. To understand how best to use this system I have included this walk through to setting up and customizing your characters.

Don't worry, it's easier than it seems. Once you try you'll have no problem using this on the character included or even on other characters.

To start with load either the character file or apply your shapes and base material to Genesis 8 Female. Now let's start customizing her look!

First you will want to apply a Base Makeup Style<sup>1</sup>. Once you have the style of eyeshadow that you want you can select the colour you want<sup>2</sup>.

We can select Eyeshadow Accents<sup>3</sup> to either add a bit of

shimmer in the same or an accent shade or select a matte style to add a secondary colour. After that we can select the colour of the accent. In some instances the colour will only darken or slightly alter the shadow style.

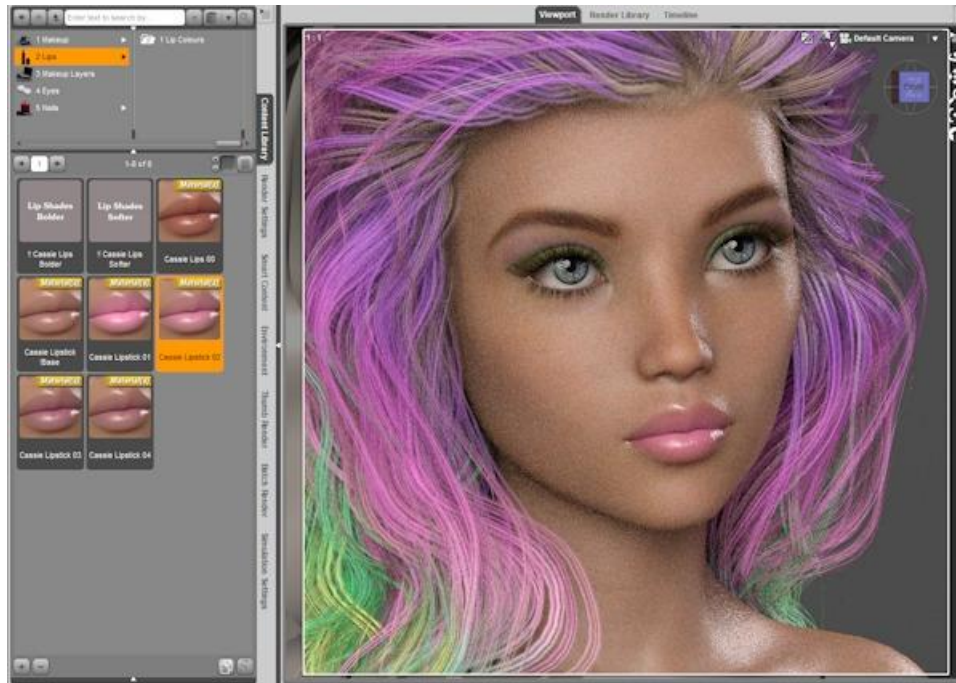

For this example we will select style "Eyeshadow 01" & colour "Mauve" from the Makeup Colours folder<sup>2</sup>.

Now let's add some more style. I'm going to apply accent style "AccentStyle 08" in colour "Green".

Now we can customize this further by going through the same steps for lipstick. For 3DA Cassie I have included a lighter base option for her lips so the lipsticks will be more apparent. You don't need to use this option, but it will give you a lighter blend of colours. I'm using the default lips (no light base), "Lipstick 02" in colour "Wine".

Now move to the Makeup Layers folder to select a blush option (this is option "Blush 03"):

Isn't she lovely?! We can further customize with various L.I.E. options.

Final image includes "Deco 03" (from) the "Detail Layers" folder, "Eyeliner 02", "Lash 05DrkBrwn".

Once you use this system you should find it easy to customize your own variety of styles and looks for your rendering needs.

Thank you for your support of my products, I hope that you enjoy this character. If you would like to be notified of new releases please favorite my [store at Renderosity](#).
